

Virtual-IT

Suppliers of Learner Management Systems and e-Learning Services

If you are looking for a solution to your training administration nightmares and would like it Cloud Based, look no further!

Virtual-IT Goes Cloud Based!!!!

As with all of our products our business is driven by Client and Industry needs and companies now have the choice of purchasing one of our Server/Computer based database systems that reside on their networks outright with a once off payment or they can host their purchased LMS on our Cloud Server, on a monthly basis.

So what are the advantages of a Cloud Based LMS?

Disaster Recovery: For any business, the loss of data can be catastrophic, with hosting your LMS on our Cloud server your data will automatically be backed up twice a day.

Software Updates Automatically Done for You: As the Cloud server is “Offsite” you don’t have to worry about the time or personnel to ensure your LMS software is updated regularly, including security, this is done for you by your service provider.

Work from Anywhere: With the Cloud, you can work from anywhere you have an internet connection and in most instances, you can connect using laptops, tablets, and even Smart phones. Meaning that you can work anytime you wish from any location.

Scalability: One of the primary benefits of Cloud based Products is being able to increase and decrease server capabilities and network capacity on an as-needed basis.

Easy to Use: Virtual-IT databases have been supporting southern African Industry for over 15 years, so our products are tried and tested, we are now offering our easy to use databases via the cloud.

Green: Our databases have been “Green” for a number of years; by installing, supporting and training via the internet we have cut our carbon footprint down considerably and with these new Cloud based systems we will continue along that path.
